

PIANO TEACHERS – help groups of students learn 50% faster.

The Fast Track Piano Tutor (FTPT) is an exciting new teaching aid. It has been shown to reduce, by over half, the time taken by young piano students to reach Grade 1 level. It's efficiency-boosting, multimedia technology allows teachers to run lessons of up to four students at one time.

NATURELLE MOTOR OILS

Naturelle is a range of biodegradable oils from Shell which are designed to lubricate gear drives in all types of machines. The six lubricants in the set are fully synthetic, and are much more environmentally friendly than mainstream oils. Naturelle oils also provide an excellent balance of wear protection and longer life span. These products are all priced at a premium level, and as such, are mainly only used in environmentally sensitive areas, such as in ports where the gear drives would be located over water. In some instances, such as when mine sites are located in National Parks, customers may come under external pressure from local governments who place a strong focus on environmental protection in these areas. These instances provide a perfect opportunity for customers to utilize the Naturelle range of products to ensure that any environmental impact associated with their operations is kept to an absolute minimum.
